Change My IP is a small program that allows you to use a different IP address whenever you connect to the Internet. The program has a list of profiles that you can configure to have a single IP address, as many as you want, or to automatically assign an IP address to the computer whenever it connects to the network. After a profile is configured, the application features a window that displays the IP address and subnet mask of the network. The window also shows the default gateway, DNS server addresses and DHCP settings. You can also configure profiles for Wi-Fi networks, Bluetooth adapters, and network interface adapters. In this case, profiles can be assigned to certain network adapters or can be enabled to work with any device that has such an interface. Change My IP can be used to change the IP address of the Wi-Fi adapter, Bluetooth adapter or network interface. Change My IP is a simple application that will do the job for you. You can use it as is or you can customize it to fit your needs. You can use it for work or you can use it for pleasure. You can use it to start up your computer, or you can start up your computer and leave it running. You can use it for the home or you can use it for the office. You can use it with Windows XP, Windows Vista, Windows 7 or Windows 8. You can use it for a single user or you can use it for more than one user. You can use it with a wireless adapter or you can use it for a wired adapter. You can use it for a router or you can use it for a firewall. You can use it for a smart phone or you can use it for a desktop or laptop computer. You can use it for a Windows system or you can use it for a Mac system. Change My IP Features: Network profiles Create network profiles to set up your computer for your home, office, or work environment. Assign profiles to different network connections. Enable the network profile you want to use when you are logged in to Windows. Enable DHCP Change My IP automatically assigns an IP address to the computer whenever it connects to the network. Addresses and subnet mask Change My IP displays the current IP address and the subnet mask of the network connection. Gateway Change My IP displays the default gateway

Change My IP is an application aimed at laptop users who access multiple network connections with the same computers and thus need to change settings every time. The program allows you to set up different profiles for each network, which basically means that you can easily switch from one configuration to another with no fuss. You can create as many profiles as you want, each of them prompting users to input IP address, subnet mask, gateway, primary and secondary DNS or enable DHCP. Once you're done setting up all your networks, the main window of the program can be used to enable any configuration you want, depending on the network you are connected to. What's more, the same window is being used to show the aforementioned settings or enable DHCP on the go. Last but not least, Change My IP allows you to configure profiles for different network interface adapters, in case you have more than one installed on your system. While there's no doubt that Change My IP can come in handy to many users, it lacks many important features, including a System Tray icon to let users quickly jump from a configuration to another. Thus, users have no other option than to launch the program every time they connect to a network. Overall, it's pretty clear that Change My IP serves its purpose very well and it addresses quite an important issue. Unfortunately, it lacks some very useful features, so it urgently needs a major update to attract more users. Looking for a good IP address changer application? Make the switch to Claria IP Manager now! Claria IP Manager makes changing your IP address as easy as clicking a mouse. It is a professional IP address changer designed to help you easily and effectively protect your network from the latest IP address leaks, IP address spoofing attacks, and other spoofing techniques. It is easy to use and can be used to perform IP address changes from any windows, including XP, Vista, and Windows 7. Why not make the switch now? It is easy to use and can be used to perform IP address changes from any windows, including XP, Vista, and Windows 7. Why not make the switch now? Create multiple IP address profiles to automate IP address changes across the network. For example, have one profile for home users and another
