Split and join using the most advanced techniques, including MD5 to verify the files are unchanged after the split.Q: Save and retrieve a model using nhibernate I have a model Person. The model has an id, firstname, lastname

---

and no setter or  
getter methods. I  
want to use  
nhibernate as the ORM  
to save/retrieve data  
for this model. Is it  
possible with  
nhibernate? If  
possible, how can I  
do this? A: You  
should use a domain  
object which has an  
id and a collection  
of "attributes"  
(which have getters

---

and setters) and use mapping the attributes into your domain objects.

Pseudo-example:

```
public class Person {  
    public int Id { get;  
    set; }  
    public string  
    FirstName { get; set;  
    }  
    public string  
    LastName { get; set;  
    }  
    public IEnumerable  
    Adresses { get; set;  
    }  
} public class  
Mapping { public void
```

---

```
Mapping(Person
person) { // some
other mappings here
Id(x => x.Id).GeneratedBy.Identity(); person.Addresses.Add(new
Address { Id = 1,
Address = "1 Main
St." }); } } public
class Address { public
int Id { get; set; }
public string Address
{ get; set; } public
Address(int id, string
address) { Id = id;
```

---

```
Address = address; }  
}  
Configuration.Add(new  
Mapping());  
Session.Save(new  
Person { Id = 1,  
FirstName = "John",  
LastName = "Doe",  
Adresses = new List()  
}); /* * This file is
