Nice tool, can't be bothered to register as a free user. Original is free, this is using it's tool, is getting this the latest version for free as it got linked in the bottom box. If I was registered, I would register this account as it's giving the full version. Similar utilities Default Title: WMI Explorer Description: WMI Explorer is a lightweight application that employs the Windows Management Instrumentation (WMI) standard to retrieve valuable system info for local and remote computers. After a fast and forthright installation, you are welcome by an intuitive interface that is designed as a dashboard for enhanced convenience. You can select one of the various categories of data from the left side and analyze the information in detail from the left panel. The program permits you to retrieve a wide variety of information about computers such as General info, Processes, Services, Event Log, System Hardware and Operating System. In addition, it includes a WMI Explorer where you can perform an impressive array of queries on various components, processes and services available on local and remote machines. It is worth mentioning that the queries are displayed as lists that feature a plethora of helpful information, including the parent process, command line if it is available, kernel, CPU time, threads, I/O operation count, so on and so forth. The WMI Explorer The WMI Explorer program enables you to check the logs for critical events. It is available in two versions: Basic and Premium. The Basic version lists the events for the last 24 hours on your computer, and the Premium version lists all the events in log since the launch of your computer. In addition, the Premium version gives you access to a number of pre-defined filters, such as Event ID and service. When you select an Event ID in the WMI Explorer, you can see a list of the services that generate that particular event, and the services that caused the particular event. You can also define custom filters that help you find the information that you are searching for more easily. To do this, right-click on any event that you want to see and then select the option Find in other events... You can combine different filters to define the characteristics of your search. For example, you can select the Find process that has a specific name, and compare that process with all processes that have a specific user name. The event log can tell you whether that process has the specified user name or not. If you
