In a group of healthy men aged 22 to 32 years (mean 27.2), a single dose of oxymetholone (Dianabol) was administered orally in a dose of 10 mg once daily for 2 weeks. The level of serum sex hormone-binding globulin (SHBG) was assessed by a radioimmunoassay. The administration of oxymetholone in a dose of 10 mg daily did not influence the level of serum SHBG. Testing for parity: planning ahead for the longitudinal part. Abstract We propose a family of variance-based tests for assessing the parity of a trend in longitudinal data. We study power properties of the tests under a series of alternative hypotheses and discuss several issues in the practical application of the tests. To facilitate the planning of future longitudinal studies, we also give a full-scale analysis of the power properties for cases where the alternatives are known in advance. The derived conclusions are applied to a retrospective analysis of the data from a longitudinal study.
