This decision has sparked a great deal of discussion about the future role of news outlets within Facebook's newsfeed (which currently offers the majority of its audience access to news content). Landon Zillmer, the current Dartmouth College student graduating this year and former Slate Editor-in-Chief, recently spoke to the Daily Telegraph about how Facebook's decision could affect the news industry and the students who work in it. Zillmer says that he has mixed feelings about the changes Facebook is making, but that he believes that moving to a ticker format "could be a good thing for the [news] industry." Zillmer, who left Slate after its 2015 merger with The Atlantic, has come out in favor of news outlets developing "their own content on the apps they've created." Currently, the predominant news sources on Facebook are CNN, MSNBC, BuzzFeed, and The New York Times. These outlets produce news content that Facebook serves up in the form of a newsfeed. Zillmer believes that this content "has created a network that's less connected to each other [and] less aware of each other than a more open news ecosystem could be." Facebook provides news outlets with a huge reach. Zillmer says that while "a lot of people don't know that Facebook has the largest audience ever," those who work in the news industry also know that Facebook is "the most valuable advertising asset out there right now." He says that news outlets have "often tacked on a lot of ads to their stories," and that Facebook's algorithm could keep many of those ads "in front of a user no matter what." Zillmer believes that Facebook's move to a ticker format could be good for news, but that it could also be good for Facebook. It seems as though Zillmer is

When designing a view model using this pattern, do I also have to create a ViewModel (NVM) for the view and then the view model would be the view model? My view model is going to have a number of properties that I think it will be more expressive and useful if it is separated from the view. A: MVVM is a pattern to organize the program structure, which does not provide you too much information about view. If your view model and your view are in the same file, then you don't need to separate them and the MVVM pattern is not appropriate. If they are different entities in a program, then you will have a ViewModel class that both View and ViewModel have dependency, so they are coupled. In this case you will need to separate the ViewModel from the View. It all depends on your requirements. Q: Ionic 3 mobile background service I am new to Ionic, but I am trying to use this library My question is - what is the best approach to run background service in Ionic 3? I do not find ionic 3 documentation, and I saw that this feature is in 3.1, and according to the site it's not clear how to use. I also tryed: A: In your MyService you write: if (background) { background.startTask(); } which means: if the background is on, start the background. This is working since Ionic 3.1.0, I hope this works for you as well. Q: Spring MVC csv outbound-gateway message conversion We are using Spring 3.1.1, Spring MVC 3. 09e8f5149f

Text to Speech Audiobook Player is a free application that enables you to listen to book (e-book, audiobook, mp3 and other formats) on your Android device without having to physically search the book. You don't have to read the text, the application will speak the audio for you. Once the application will be installed, it will create a new virtual library to store all your text to speech audiobooks. The application works with all Android devices running version 2.3 and above. Once you finished your reading session, the app will listen for an hour from the disk or from the internet. You can choose your desired title from the virtual library and the application will start the reading session. The application will listen to the audio until the battery is empty or you close it. Text to Speech Audiobook Player comes with a warning. The performance of the app is not optimal. The application reads the text in just one direction. Also, the app does not allow you to resume a paused session. The reading will continue from the last speech position reached. If you prefer, the application will be able to read one direction and resume the reading session after the session is finished. How to install Text to Speech Audiobook Player on Android: Copy the APK file and install it directly on the external memory, you can do that with the Android app installer. Open the Google Play market to verify the application. The application comes with a 30-day free trial, please consider to subscribe to its premium account when you are ready to make use of its full version. If you have any problem using this app, please don't hesitate to contact us at support@norman.com. Ask anyone who has used Windows 7 if they have never run into a problem with anything (including printing) and you're likely to get a resounding "yes." Actually, some of them might even say, "I'm holding off on installing this because I'm afraid I'll need help." It may not be fair to call them negative Nellies, but after all, Windows 7 is the operating system you want to be afraid of when you get to the end of the road. If you're an Apple fan, you probably have an entirely different (and equally valid) story of what a pain Windows 7 is to deal with. The point is, each OS has its peculiar share
